

WHAT IS CLAIMED IS:

1. In a computer system comprising:
 - a first computer, a second computer, a management computer operated by an operator to install a target program and a storage system coupled to said first computer, said second computer and said management computer,
 - wherein said storage system includes a shared logical unit accessed by each of said first computer, said second computer and said management computer, a first logical unit accessed by said first computer, and a second logical unit accessed by said second computer;
 - an install method of installing a target program to be installed for said first computer and said second computer, comprising the steps of:
 - controlling said first computer and said second computer from said management computer to start a process executed by an install agent of each of said first computer and said second computer;
 - loading an installer program stored in said shared logical unit into each of said first computer and said second computer by the install agent ;
 - installing, according to the installer program on said first computer, said target program for said first computer by controlling transfer of said target program stored in said shared logical unit to said first logical unit; and
 - installing, according to the installer program on said second computer, said target program for said second computer by controlling transfer of said target program stored in said shared logical unit to said second logical unit; and
 - so that said first computer can use said target program stored in said first logical unit and said second computer can use said target program stored in said second logical unit.
